

Functional Testing

The following major functions are tested:

Test 1 – Home Page

The user opens the FitBuddy application.

Expected Result:

The FitBuddy home page should be displayed correctly.

Test 2 – User Input

The user enters personal and fitness information.

Input includes:

- Name
- User ID
- Age
- Weight
- Fitness Goal
- Workout Intensity

Expected Result:

The entered information should be accepted by the application.

Test 3 – Workout Generation

The user submits the form to generate a workout plan.

Expected Result:

The application should generate a personalized 7-day workout plan using the AI model.

Test 4 – Nutrition Tip

The application generates a nutrition or recovery tip based on the selected fitness goal.

Expected Result:

A relevant nutrition or recovery tip should be displayed.

Test 5 – Feedback

The user submits feedback about the generated workout plan

Expected Result:

The feedback should be processed and the workout plan should be updated.

Test 6 – Database

User information and generated plans are stored in the SQLite database.

Expected Result:

The user and plan information should be stored successfully.

Test 7 – Admin View

The administrator accesses the user management page.

Expected Result:

Registered users and their workout plans should be displayed.

The project source describes these functions as the core user, feedback, nutrition and admin scenarios.
