

Testing Objectives

The main objectives of testing are:

1. To verify that the application starts successfully.
2. To verify that user information is accepted correctly.
3. To verify workout plan generation.
4. To verify nutrition or recovery tip generation.
5. To verify feedback submission.
6. To verify workout plan updating.
7. To verify database operations.
8. To verify the admin view.
9. To verify frontend and backend integration.
