

Define Problem Statement

Problem Statement

Many people want to follow a fitness routine but may not know how to create a workout plan that matches their fitness goal, body information and preferred workout intensity.

General workout plans may not be personalized to individual requirements.

FitBuddy addresses this problem by using AI to generate personalized 7-day workout plans based on user information and fitness goals

Proposed Solution

FitBuddy uses FastAPI as the backend framework and Google Gemini AI models to generate customized workout plans.

The system collects user information and sends appropriate prompts to the Gemini model. The generated plan is displayed through a web interface.

Users can also provide feedback and receive an updated workout plan.
